PROFESSIONAL SUMMARY

Offensive security professional with a hacker mindset, CompTIA PenTest+ certified, specializing in vulnerability assessment, penetration testing, and red team operations across banking, government, and enterprise environments. Approaches every system the way an attacker would, finding the gaps before they get exploited, then translating those findings into clear remediation actions that development and business teams can execute on.

CERTIFICATION

CompTIA PenTest+ - CompTIA

PROFESSIONAL EXPERIENCE

Tech Vulnerability Engineer (VAPT)

October 2025 - Present

CIMB Bank Philippines

- Conducted VAPT across the bank's web applications, APIs, mobile modules, and corebanking assets, manually verifying each finding for exploitability, resulting in accurate risk reporting with minimal false positives reaching stakeholders.
- Established the bank's VAPT process and SOPs from the ground up, defining how pentesting gets scoped, scheduled, and reported, giving the organization its first structured approach to regular security validation.
- Validated SAST findings from Fortify Scanner and performed reverse engineering of mobile applications using Ghidra and Frida to identify hardcoded credentials, exposed tokens, and weak payload encryption, ensuring no critical flaws ship to production.
- Tested security tooling (Zimperium, SmartStream TLM) prior to production deployment, identifying integration gaps early and enabling smooth rollouts without security exposure.
- Managed 3rd party VAPT vendor engagements end-to-end, from vendor selection and scope definition to translating technical findings into actionable items for business operations.
- Collaborated with development teams to communicate security risks and attacker exploitation techniques, while driving Secure SDLC adoption through internal security roadshows and training sessions.
- Provided attacker-perspective analysis during cybersecurity incidents, performing triage to determine root cause and potential impact on bank operations.

Penetration Tester

March 2024 - October 2025

Next Generation Technologies Global Inc.

- Performed web application and infrastructure VAPT for private companies and government bodies across the Philippines as part of a 3rd party VAPT vendor, identifying critical vulnerabilities including SQL injection, XXE, and server misconfigurations.
- Executed both remote and onsite penetration tests using Burp Suite, Nessus, Qualys, sqlmap, and Nmap, delivering findings that directly informed client remediation priorities.
- Carried out red team engagements involving phishing campaigns, physical security testing, and lateral movement, exposing infrastructure weaknesses that traditional assessments missed.
- Authored tailored VAPT reports for each engagement, mapping vulnerabilities across network and application layers in a format that both technical and non-technical stakeholders could act on.

Tech Process Senior Associate

May 2022 - February 2024

Google Operations Center

- Collaborated directly with Google engineers in the US to triage and resolve code-level bugs across Google Payment Services, supporting Ads and payment integrations used by multiple business units.
- Managed coding configurations for partner payment service integrations, handling multiple concurrent projects and autonomously resolving integration issues to maintain service continuity.
- Served as post-launch partner contact, tracking case records and identifying process improvements, resulting in more efficient escalation workflows and clearer technical documentation for stakeholders.

TECHNICAL SKILLS

VAPT & Recon: Burp Suite, Metasploit, Nmap, Nessus, Qualys, OWASP ZAP, sqlmap, dirbuster, nikto, hydra, theHarvester

SAST: Fortify Scanner

Mobile Security: Frida, MobSF

Reverse Engineering: Ghidra, IDA Pro

Network & Wireless: Wireshark, aircrack-ng

Frameworks: OWASP Top 10, NIST, CVSS, PTES, Secure SDLC

Programming: Python, Bash, Java

Platforms: Linux (Kali Linux), Windows

Focus Areas: Web application testing, Android/iOS mobile testing, WiFi testing, infrastructure/network testing, red team operations

EDUCATION

Bachelor of Science in Information Technology - AMA Computer College Makati

2016 - 2019
